

Victor Mendonça

Principal Software Engineer | Platform Architect | AI Systems, Data Platforms & Multi-Tenant SaaS

São Paulo, Brazil

PROFESSIONAL SUMMARY

Software Engineer, Platform Architect, and Technology Leader with 15+ years of experience designing, building, and operating scalable SaaS platforms, distributed systems, data-intensive applications, and AI-powered products. My experience spans fintech, legaltech, e-commerce intelligence, analytics, enterprise software, and artificial intelligence. Throughout my career, I have evolved from hands-on software development into architecture and technical leadership roles, driving initiatives that combine software engineering, platform strategy, data engineering, and business outcomes.

I specialize in building platforms that transform fragmented data, processes, and knowledge into scalable operational systems. My work focuses on multi-tenant SaaS architectures, integration ecosystems, workflow automation, observability, large-scale data acquisition, AI-native products, and knowledge systems.

Most recently, I have been leading the architecture and development of a white-label SaaS ecosystem composed of shared infrastructure, connector platforms, large-scale data acquisition services, workflow automation, AI systems, and vertical business applications built upon a unified multi-tenant architecture. In parallel, I contribute to enterprise-grade analytics platforms focused on e-commerce intelligence, marketplace integrations, advertising performance, and large-scale data processing.

CORE AREAS OF EXPERTISE

- | | | |
|-------------------------|--------------------------|------------------------------------|
| • Platform Architecture | • Integration Ecosystems | • RAG & Knowledge Systems |
| • Multi-Tenant SaaS | • Workflow Automation | • Event-Driven Architecture |
| • Distributed Systems | • AI & LLM Applications | • Observability & Reliability Eng. |
| • Data Platforms | • Agentic Systems | • Engineering Leadership |

PROFESSIONAL EXPERIENCE

Founder & Platform Architect

White-Label SaaS Ecosystem

January 2023 – Present

Architect and technical lead behind a unified multi-tenant SaaS ecosystem designed to support multiple business domains through a shared platform architecture. Responsible for product strategy, software architecture, infrastructure design, AI systems, data platforms, engineering standards, and long-term platform evolution.

Platform Foundation

Designed and implemented a shared platform architecture composed of:

- Infrastructure Control Plane & Multi-Tenant Runtime
- Universal Connector Framework & Data Acquisition Services
- Workflow Automation Engine & Shared Observability Platform
- AI Operational Layer & Knowledge Systems

Oracle — Shared Infrastructure Control Plane

Designed the foundational infrastructure layer responsible for operating all platform services and shared resources.

Capabilities:

- Service Discovery
- Centralized Routing
- Shared Databases
- Shared AI Infrastructure
- Vector Search Infrastructure
- Workflow Runtime Services
- Platform Observability

Connector Bridge — Integration & Intelligence Platform

Designed a multi-tenant integration and intelligence platform responsible for ingestion, normalization, synchronization, and intelligence generation.

Capabilities:

- Marketplace & Advertising Integrations
- Canonical Data Models
- Distributed Processing Pipelines
- Operational Intelligence
- Workflow Automation
- Retrieval-Augmented Gen (RAG)

Datahouse Platform

Designed a data platform composed of:

- **SWS Datahouse:** Large-scale data acquisition infrastructure focused on Distributed Crawling, Browser Automation, Proxy Management, Anti-Bot Strategies, Data Collection Pipelines, and Monitoring.
- **Hub Datahouse:** Multi-tenant application framework supporting Workflow Automation, Content/Project Management, Recruitment Systems, Real Estate Solutions, Scheduling, and Operational Dashboards.

AI-Native Applications (Lumi & Ella)

- **Lumi:** AI-native vertical SaaS for beauty professionals/salons offering CRM, Scheduling, Workflow Automation, and AI-Assisted Operations.
- **Ella:** AI-native operational assistant integrated across the ecosystem with Persistent Memory, Knowledge Retrieval, Agentic Workflows, Tool Execution, and Human-AI Collaboration.

Technologies: TypeScript, Node.js, Next.js, React, PostgreSQL, Redis, MongoDB, Docker, Kubernetes, BullMQ, Prisma, ClickHouse, Qdrant, pgvector, Ollama, MCP, Event-Driven Architecture, RAG.

Senior Software Engineer

Visualitics

2025 – Present

Senior engineer contributing to the architecture and development of a unified e-commerce intelligence platform that consolidates operational, advertising, analytics, and market intelligence data into a single decision-making layer. Delivering contextual insights directly within the user workflow through web applications and a Chrome Extension.

Key Contributions:

- Architecture and development of multi-source data ingestion pipelines.
- Marketplace, advertising, and analytics platform integrations (Mercado Livre, Shopee, Amazon SP-API, VTEX, NuvemShop, GA4, Meta Ads, Google Ads).
- Backend services, distributed processing workflows, ETL architecture, and KPI computation pipelines.
- Data modeling across transactional and analytical workloads; event-driven processing and async job execution.

Technologies: Node.js, TypeScript, Express, Prisma, Zod, PostgreSQL, Redis, BullMQ, Python, FastAPI, BigQuery, Google Cloud Storage, React, Vite, Chrome Extension APIs, GitHub Actions, GCP.

Senior Software Engineer

Jusbrasil

March 2024 – April 2025

Contributed to the design and evolution of large-scale web access infrastructure supporting data acquisition and intelligence operations.

Key Contributions:

- Proxy and routing architecture; infrastructure optimization and cost reduction.
- Reliability, resiliency improvements, and observability/monitoring initiatives.
- Internal tooling and developer productivity improvements.

Technologies: Node.js, TypeScript, Docker, Kubernetes, Redis, PostgreSQL, Observability Platforms, Proxy Infrastructure.

Senior Software Engineer

Stone

August 2023 – March 2024

Worked on large-scale financial systems supporting payment processing, merchant acquiring, and financial operations. Responsibilities included backend services and APIs, distributed systems, financial integrations, reliability/performance optimization, and engineering quality initiatives.

Technologies: Node.js, TypeScript, Cloud Infrastructure, Financial Services, Distributed Systems.

Technology Manager

Ascential

January 2023 – June 2023

Led engineering initiatives powering digital commerce intelligence platforms used by global consumer brands. Handled engineering leadership, platform architecture, data platform strategy, and technical roadmap definition.

Business Impact: Enabled global brands to optimize pricing, availability, search visibility, content quality, and digital shelf performance.

Technical Lead

Intellibrand

July 2021 – January 2023

Led the architecture and development of large-scale retail intelligence platforms processing millions of product, pricing, inventory, and merchandising signals across global retailers and marketplaces. Directed platform scalability, data ingestion pipelines, pricing intelligence systems, and digital shelf analytics.

Full Stack Developer

Intellibrand

June 2019 – July 2021

Developed and maintained digital commerce analytics platforms focused on retail intelligence and market performance. Managed frontend applications, backend services, APIs, data pipelines, and DevOps (CI/CD).

Full Stack Developer

Zoroastro C. Teixeira Advogados Associados

August 2018 – June 2019

Designed and developed legal operations software supporting case management, financial controls, workflow automation, and operational reporting.

Technologies: Node.js, Angular, MongoDB, AWS.

Java Full Stack Developer

Contalex

December 2014 – June 2017

Developed SaaS ERP solutions for accounting firms, including financial management systems, billing, recurring payments, customer onboarding workflows, and administrative systems.

Technologies: Java, Spring Framework, SQL Server, AngularJS, Azure.

SELECTED ACHIEVEMENTS

- Designed a complete white-label SaaS ecosystem composed of infrastructure, data platforms, integration services, AI systems, workflow automation, and vertical applications.
- Built architectures spanning multi-tenant SaaS, large-scale data acquisition, connector frameworks, AI-native services, and operational intelligence platforms.
- Led development of commerce intelligence solutions used by global brands operating across major marketplaces and retail ecosystems.
- Contributed to enterprise-scale financial, legal, analytics, and data platforms across multiple industries.
- Specialized in transforming fragmented operational data into scalable intelligence and automation systems.

TECHNICAL SKILLS

Architecture & Leadership: Platform Architecture • Software Architecture • Distributed Systems • Multi-Tenant SaaS • Technical Leadership • Engineering Strategy • Systems Design • Product Engineering • Solution Architecture

AI & Data: Artificial Intelligence • LLMs • Agentic Systems • RAG • Knowledge Systems • Data Engineering • Data Platforms • ETL • Data Pipelines • Vector Databases

Backend: TypeScript • JavaScript • Node.js • Express • NestJS • Java • Spring Framework • REST APIs • Microservices

Frontend: React • Next.js • Angular • TypeScript

Databases: PostgreSQL • Redis • MongoDB • MySQL • ClickHouse • Qdrant • pgvector • BigQuery

Infrastructure: Docker • Kubernetes • AWS • GCP • CI/CD • GitHub Actions • Linux • Observability • Monitoring

TARGET ROLES

- | | | |
|-------------------------------|---------------------------|---------------------------|
| • Principal Software Engineer | • Solutions Architect | • Head of Engineering |
| • Staff Software Engineer | • AI Systems Architect | • Director of Engineering |
| • Platform Architect | • Data Platform Architect | • Fractional CTO |
| • Software Architect | • Engineering Manager | |
